DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1, drawn to a method for obtaining chondrocytes, classified in class 424, subclass 422.
- II. Claim 2, drawn to a method of cell culture, classified in class 435, subclass 394.
- III. Claim 3, drawn to chondrocytes capable of becoming cultured chondrocytes, classified in class 424, subclass 93.7.
- IV. Claim 4, drawn to a polymer composition, classified in class 424, subclass 423.
- V. Claims 5-9, 22 and 23, drawn to a method of cell culture using micro-carriers, classified in class 800, subclass 21.
- VI. Claims 10-17, drawn to a tissue-engineered replacement body part, classified in class 623, subclass 11.

Inventions I, II, III, IV, V, and VI are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed

Art Unit: 3738

does not require the particulars of the subcombinations as claimed because the combination can be performed with cells other than chondrocytes, which do not need to be spin cultured or cultured on microcarriers, and that can be grown on scaffolds made without chitosan. The subcombinations have separate utility such as using chondrocytes for making a prosthetic meniscus for the knee.

Inventions I, II, III, IV, V and VI are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case: invention I has separate utility such as for obtaining other types of cells from cartilage, invention II has separate utility such as culturing chondrocytes for making pharmaceuticals, invention III has separate utility such as for research, invention IV has separate utility such as for cells other than chondrocytes. The cells of inventions I, II, III and IV do not require microcarriers for culturing. In addition, invention V does not require a low oxygen concentration environment. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
